

Empowering Banks
to employ
branchless banking

For Bank

This application is designed to allow your Bank officers to perform Banking transactions out in the field. Customer authentication can be done via signature/photographs or via our bio metrics utilities. It works on any Java phones and connects to the Central Banking Database over a secured channel over the GPRS/EDGE communication network. Software can be integrated to any Legacy Core Banking / Micro Finance Core system. System is highly customizable to cater for any changes that the business may require without any development efforts and can be managed in house.

Features

- System Settings

- Mini Statement
- Mobile Airtime Purchase
- Utility payments
- Product Information

Providing anytime,
anywhere secure
and easy access to
banking services

Printing

The database is used to save information that would be needed in future. For Example System settings, Pending print jobs and so on

In-Built mini-database

TruCell generates two receipts for the customer and for the operator using the Bluetooth printer for every successful transaction made. At times of print action failure the receipt data is saved in the in-built database for future use. Apart from transaction receipts, a breakdown from a loan calculator, customer balances and mini statements can also be printed.

For Customers

This software is designed for your customers to take a full control of their bank accounts using their mobile phone. The software provides full m-commerce business operations so that your customers can use his mobile device to perform his banking business at a touch of a button.

Modules

- Balance Enquiry
- Mini-Statement
- Statement Request
- Stop Payments Request
- Other Accounts Transfers
- Mobile Money A/c Transfer
